

F-001 – Processed Human Plasma

Product Description:

Processed human plasma with standardized biochemical characteristics suitable for diagnostic, analytical, and manufacturing applications while preserving the native plasma matrix.

Intended Use:

- Clinical chemistry assay development.
- Coagulation assay evaluation.
- Preparation of calibrators and quality control materials.
- Method validation.
- Instrument verification.
- Matrix-effect and stability studies.
- IVD reagent manufacturing.

Quality Control:

Each production batch is tested, as appropriate for the product type, for:

- Target analyte concentration (confirmation of depletion)
- Total protein
- Albumin
- Globulins
- Appearance and clarity
- Additional biochemical parameters, as required by the product specification or by the customer
